

Air Sanitizer

Finally, a way to clean the air we breathe.

TimeMist Air Sanitizer contains Glycols and Quaternary Ammonium Chlorides (QUATS). Glycols and QUATS are proven to kill a wide variety of viruses, a broad spectrum of bacteria, fungi, and molds.

Glycol is also an active ingredient in sanitizing and deodorizing the air.

QUATS are positively charged molecules with relatively long hydrophobic "tails." These molecules eliminate bacteria by destroying their outer membranes and literally dissolving bacteria. They kill viruses by binding to their external coats, preventing normal function and even denaturing their protective coatings. QUATS are highly effective, quick-acting germicidal agents that are not toxic to humans or animals.

For use in:

Medical offices, cafeterias, waiting rooms, break rooms, lobbies & hallways, childcare centers and anywhere else you want to make the air you breathe cleaner and promote a healthier environment.

Part #	Description	Qty/Case
